Superdense Coding Protocol

Problem Definition

- Alice and Bob are in different parts of the world.
- **Need**: Alice wants to communicate two bits a and b to Bob
- **Constraint:** Alice can send just a single qubit.
- **Fact:** *Alice cannot encode two classical bits into a single qubit in any way that would give Bob more than just one bit of information about the pair (a, b).*
- **Verdict:** There is no way they can accomplish this task without *additional resources*

This protocol was first proposed by Bennett and Wiesner in 1970 and experimentally actualized in 1996 by Mattle, Weinfurter, Kwiat and Zeilinger using **entangled photon pairs**.

Share an $e-$bit

- **Additional Resource:** One pre-shared unit of entanglement
- Alice and Bob prepare two qubits A and B in the superposition:

$$\frac{1}{\sqrt{2}} |00\rangle + \frac{1}{\sqrt{2}} |11\rangle$$

Alice takes qubit A and Bob takes the qubit B.[1]

- **Implication:** *Given the additional resource of a shared e−bit of entanglement, Alice will be able to transmit both a and b to Bob by sending just one qubit.*

---

[1]This is independent of the knowledge of (a, b)
Note that the first two gates are acting on **one classical bit** and **one qubit**. Generally, this applies *only* when the *classical bit is a control bit* for some operation.

- Alice applies controlled$-\sigma_z$ gate[2] to qubit A with the **control bit** as a.

$$\text{controlled-}\sigma_z \rightarrow \begin{pmatrix} 1 & 0 & 0 & 0 \\ 0 & 1 & 0 & 0 \\ 0 & 0 & 1 & 0 \\ 0 & 0 & 0 & -1 \end{pmatrix}$$

- Evolution of state of A, B

ab	After Step-1
00	$\frac{1}{\sqrt{2}}\lvert 00\rangle + \frac{1}{\sqrt{2}}\lvert 11\rangle$
01	$\frac{1}{\sqrt{2}}\lvert 00\rangle + \frac{1}{\sqrt{2}}\lvert 11\rangle$
10	$\frac{1}{\sqrt{2}}\lvert 00\rangle - \frac{1}{\sqrt{2}}\lvert 11\rangle$
11	$\frac{1}{\sqrt{2}}\lvert 00\rangle - \frac{1}{\sqrt{2}}\lvert 11\rangle$

[2]Recall the Pauli matrices

- Alice applies controlled$-\sigma_x$ gate[3] to qubit A with the **control bit** as b.

$$\text{controlled-}\sigma_x \rightarrow \begin{pmatrix} 1 & 0 & 0 & 0 \\ 0 & 1 & 0 & 0 \\ 0 & 0 & 0 & 1 \\ 0 & 0 & 1 & 0 \end{pmatrix}$$

- Evolution of state of A, B

ab	After Step-1	After Step-2
00	$\frac{1}{\sqrt{2}} \lvert 00\rangle + \frac{1}{\sqrt{2}} \lvert 11\rangle$	$\frac{1}{\sqrt{2}} \lvert 00\rangle + \frac{1}{\sqrt{2}} \lvert 11\rangle$
01	$\frac{1}{\sqrt{2}} \lvert 00\rangle + \frac{1}{\sqrt{2}} \lvert 11\rangle$	$\frac{1}{\sqrt{2}} \lvert 10\rangle + \frac{1}{\sqrt{2}} \lvert 01\rangle$
10	$\frac{1}{\sqrt{2}} \lvert 00\rangle - \frac{1}{\sqrt{2}} \lvert 11\rangle$	$\frac{1}{\sqrt{2}} \lvert 00\rangle - \frac{1}{\sqrt{2}} \lvert 11\rangle$
11	$\frac{1}{\sqrt{2}} \lvert 00\rangle - \frac{1}{\sqrt{2}} \lvert 11\rangle$	$\frac{1}{\sqrt{2}} \lvert 10\rangle - \frac{1}{\sqrt{2}} \lvert 01\rangle$

---

[3]Recall $\sigma_x = \text{NOT}$

- Alice sends the qubit A to Bob
- This is the **only** qubit that is sent during the protocol
- Recall, this was the constraint given in the problem definition

- Bob applies a controlled-NOT operation to the pair (A, B), where A is the control and B is the target

| ab	After Step-2	After Step-4
00	$\frac{1}{\sqrt{2}}\lvert 00\rangle + \frac{1}{\sqrt{2}}\lvert 11\rangle$	$\frac{1}{\sqrt{2}}\lvert 00\rangle + \frac{1}{\sqrt{2}}\lvert 10\rangle = \left(\frac{1}{\sqrt{2}}\lvert 0\rangle + \frac{1}{\sqrt{2}}\lvert 1\rangle\right)\lvert 0\rangle$
01	$\frac{1}{\sqrt{2}}\lvert 10\rangle + \frac{1}{\sqrt{2}}\lvert 01\rangle$	$\frac{1}{\sqrt{2}}\lvert 11\rangle + \frac{1}{\sqrt{2}}\lvert 01\rangle = \left(\frac{1}{\sqrt{2}}\lvert 1\rangle + \frac{1}{\sqrt{2}}\lvert 0\rangle\right)\lvert 1\rangle$
10	$\frac{1}{\sqrt{2}}\lvert 00\rangle - \frac{1}{\sqrt{2}}\lvert 11\rangle$	$\frac{1}{\sqrt{2}}\lvert 00\rangle - \frac{1}{\sqrt{2}}\lvert 10\rangle = \left(\frac{1}{\sqrt{2}}\lvert 0\rangle - \frac{1}{\sqrt{2}}\lvert 1\rangle\right)\lvert 0\rangle$
11	$\frac{1}{\sqrt{2}}\lvert 10\rangle - \frac{1}{\sqrt{2}}\lvert 01\rangle$	$\frac{1}{\sqrt{2}}\lvert 11\rangle - \frac{1}{\sqrt{2}}\lvert 01\rangle = \left(\frac{1}{\sqrt{2}}\lvert 1\rangle - \frac{1}{\sqrt{2}}\lvert 0\rangle\right)\lvert 1\rangle$

- Bob applies a Hadamard transform to A

ab	After Step-4	After Step-5
00	$\left(\frac{1}{\sqrt{2}}\left|0\right\rangle + \frac{1}{\sqrt{2}}\left|1\right\rangle\right)\left|0\right\rangle = H\left|0\right\rangle\left|0\right\rangle$	$\left|00\right\rangle$
01	$\left(\frac{1}{\sqrt{2}}\left|1\right\rangle + \frac{1}{\sqrt{2}}\left|0\right\rangle\right)\left|1\right\rangle = H\left|0\right\rangle\left|1\right\rangle$	$\left|01\right\rangle$
10	$\left(\frac{1}{\sqrt{2}}\left|0\right\rangle - \frac{1}{\sqrt{2}}\left|1\right\rangle\right)\left|0\right\rangle = H\left|1\right\rangle\left|0\right\rangle$	$\left|10\right\rangle$
11	$\left(\frac{1}{\sqrt{2}}\left|1\right\rangle - \frac{1}{\sqrt{2}}\left|0\right\rangle\right)\left|1\right\rangle = -H\left|1\right\rangle\left|1\right\rangle$	$-\left|11\right\rangle$

- Bob measures both qubits A and B.

- The output will be (a, b) with certainty.

Note $H^2\left|0\right\rangle = \left|0\right\rangle$ and $H^2\left|1\right\rangle = \left|1\right\rangle$
Note that the first two gates are acting on **one classical bit** and **one qubit**. Generally, this applies *only* when the *classical bit is a control bit* for some operation.
